Office Action Summary

Art Unit: 1638

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-16, drawn to methods of crossing male and female elite corn varieties which contain the GaS allele, classified in class 800, subclass 271, for example.
- II. Claims 17-20, drawn to methods for corn selection comprising crossing corn plants with purple-seeded corn, classified in class 800, subclass 275, for example.

The inventions are distinct, each from the other because:

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different functions and different modes of operation. The invention of Group I involves methods of pollination control and methods of designating individual breeding partners as male or female, each not required by Group II. The invention of Group II involves multiple pollinations of the same plant, and the use of a purple kernel gene, each not required by Group I.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, classification and fields of search, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
